- UI description

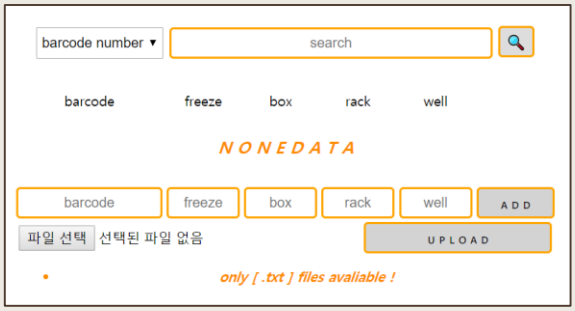
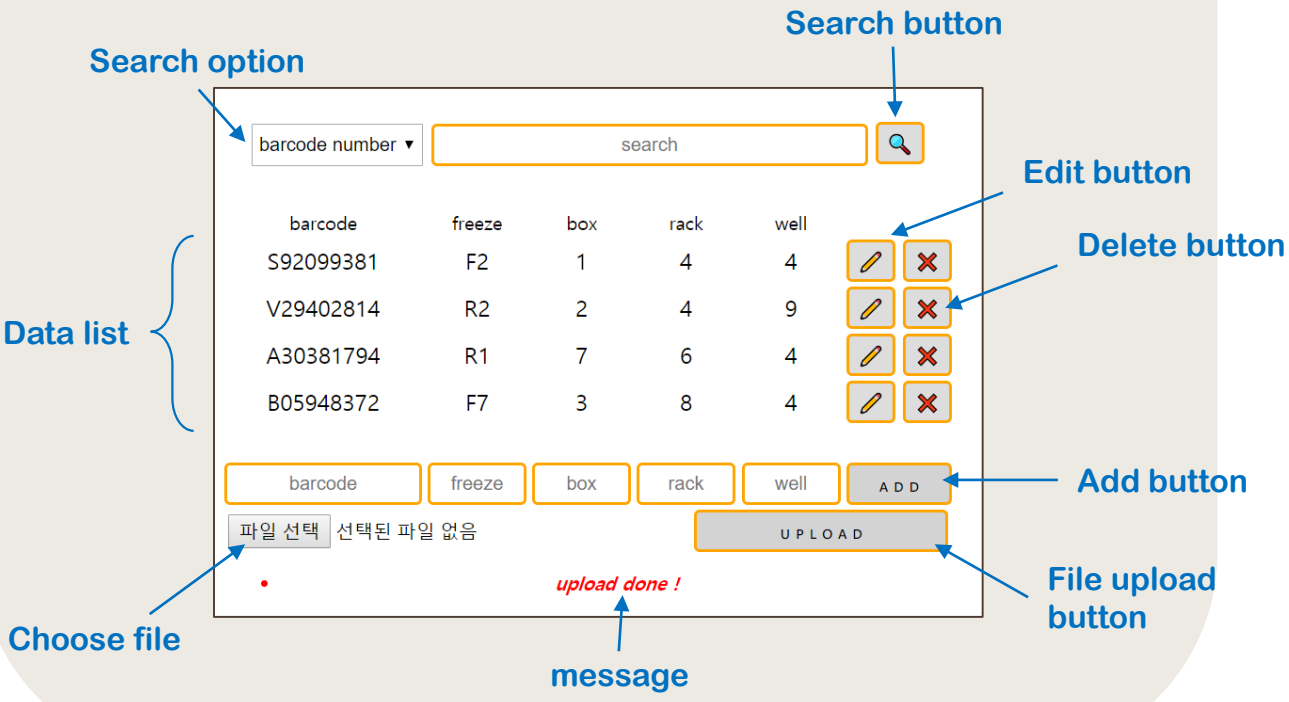
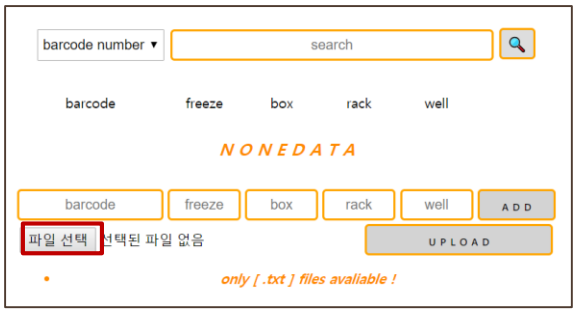
This is the basic page (there are no data)





- Add data (1)

You can add data from .txt file
(the delimiter is 'tab' key)



This is example of .txt file

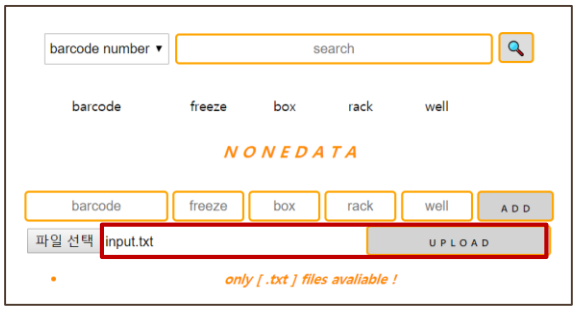
input - 메모장

파일(F) 편집(E) 서식(O) 보기(V) 도움말(H)

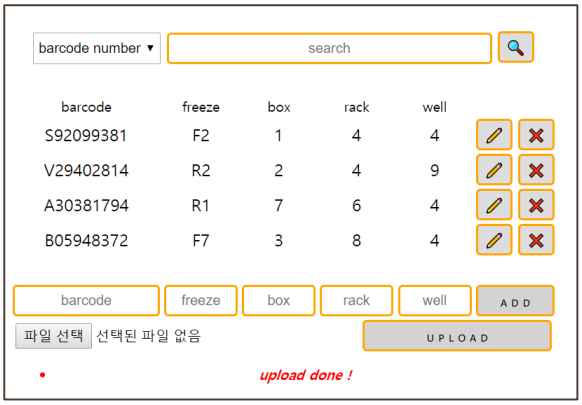
S92099381	F2	1	4	4
V29402814	R2	2	4	9
A30381794	R1	7	6	4
B05948372	F7	3	8	4

Columns are
[barcode] [freeze] [box] [rack] [well] in order
If there are blank or not proper data,
this can't be uploaded.

Select file, and press 'UPLOAD' button

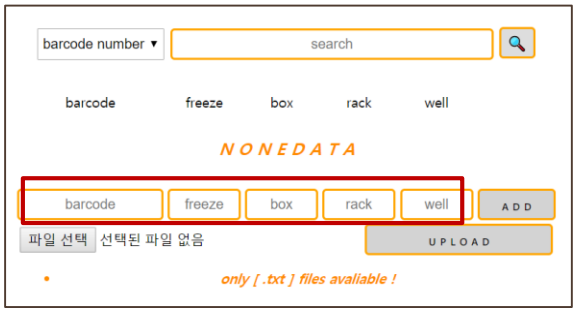


Successfully Data uploaded!

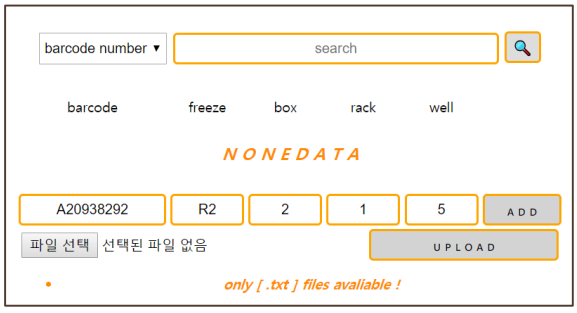


- Add data (2)

You can add data from text input

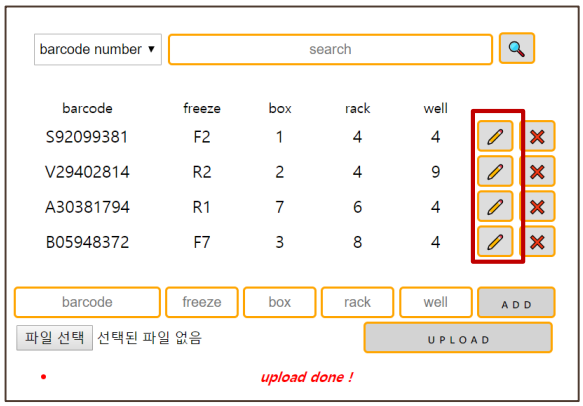


Insert each data and press 'ADD' button

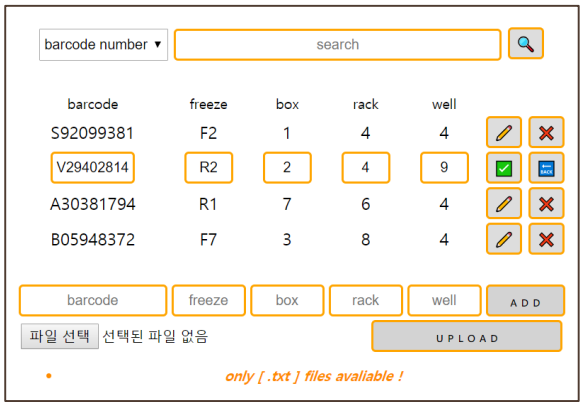


Done.
But it also not allow blank data.

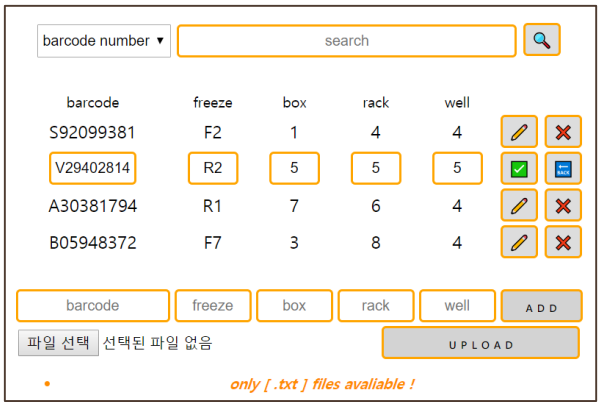
- Edit



Click the button next to data you want to edit



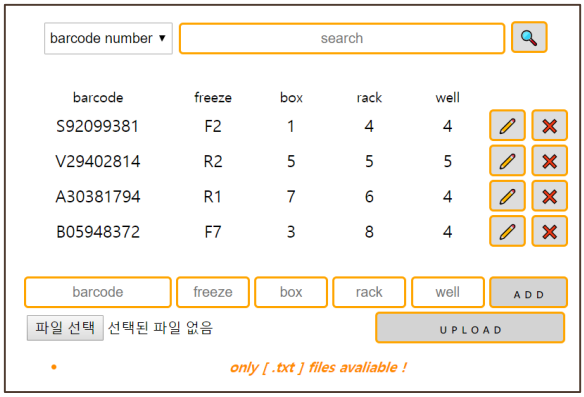
Data change into the textbox.



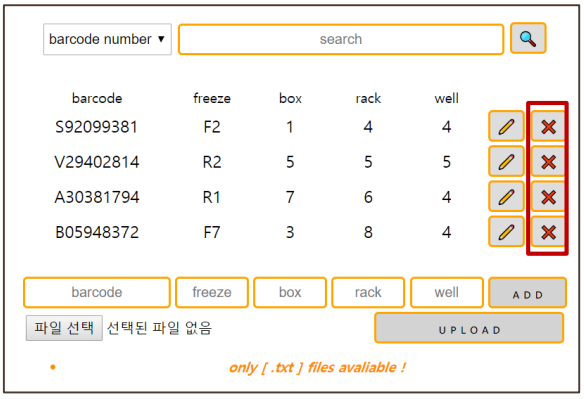
Please enter a value to change.

Click the green button if you changing data done.
Click the blue back button if you cancel the change.

Done !

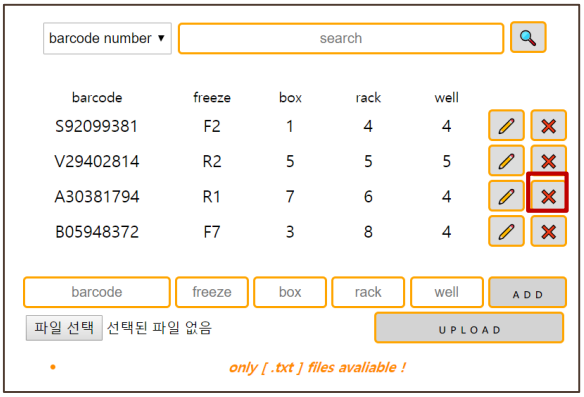


- Delete



Click the button next to data you want to delete

There is no confirmation message box.
So be careful!

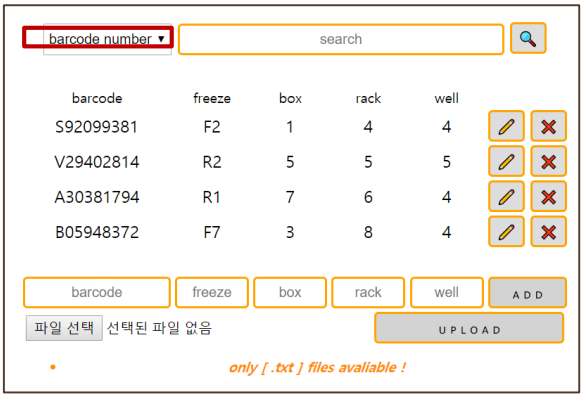


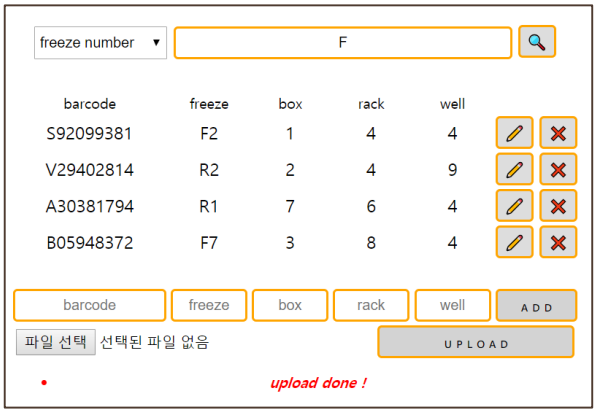
I'm going to delete this one

Done !

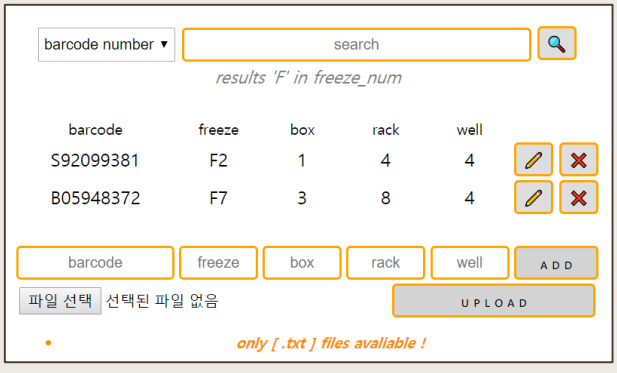
- Search

Check the option value before you search



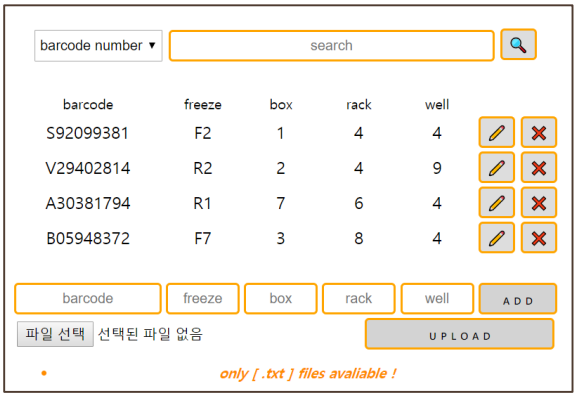


I selected [freeze number] and keyword 'F'. Click the search button



This is the result !

If you entered nothing and click the search button, what will happen?



Just back to the full list
